Overhead view of completed West End Community Center and parking lot

East Elevation of project location (*note that this picture was taken before completion of West End Senior Center*)

The diagram below shows the proposed layout of the roof mounted arrays as well as the parking structure. Upon award of the grant, the City will execute a design/build contract with an approved vendor who will perform a complete engineering analysis, but preliminary estimates indicate that the center's roof will allow for at least 10 KW (1,000 sqft) of solar panels, while the remaining 40 KW (4,000 sqft) will be installed atop a shaded parking structure.
