

EXHIBIT VII: FUEL ADJUSTMENT FORMULA

Fuel Adjustment

A per-trip fuel surcharge shall be added to the total cost of the tow where the average "retail" price of diesel fuel is **\$3.60** or greater. The average "retail" price of diesel fuel in San Antonio shall be based on the retail prices listed for "retail" diesel fuel by the Oil Price Information Service (OPIS) for the San Antonio area. Fuel surcharges shall become effective on March 1, June 1, September 1, and December 1, through the term of this contract. The average price shall be calculated for the most recent 12-week period ending no less than fourteen (14) days prior to the surcharge effective date. The City of San Antonio's Finance Department (Public Utilities group) will calculate the adjustment and communicate to the Police Department for implementation.

The base market price, subject to the adjustment provided for herein, shall be **\$3.60** per gallon. The fuel adjustment will be calculated based on the following table and shall apply to all tows performed to the contract.
